Multiple Redis Instances

Manage Redis From CLI

Eviction Policies

Remove LRU
keys without
considering
expire set

allkeys-lru

Evict the keys
randomly

allkeys-random

Evict the keys
that has expire
set randomly

volatile-random

Evict the keys
that has expire
set and a
shorter TTL

volatile-ttl

Heroku CLI

```
Heroku addons:create
```

```
heroku-redis:<PLAN_TYPE>
```

```
--timeout <TIMEOUT_VALUE>
```

```
--maxmemory_policy <EVICTION_POLICY>
```

Heroku Redis Maintenance Mode

Application

Web dynos

Worker dynos

One-off dynos

Maintenance Mode Vs Maintenance Window

Unscheduled
maintenance

Maintenance mode

Planned maintenance

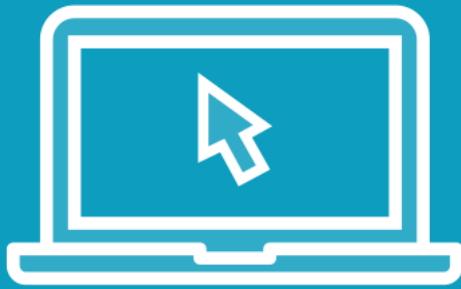

Maintenance window

Securing Redis Connection and Migrating Redis Data

Demo

Create a new Redis hobby-dev instance

Migrate data from an existing instance

Migrating to Private Spaces Plan

Fetch REDIS_URL using heroku credentials command

Turn on the maintenance mode

Provision the private plan

Make the new Redis instance as your primary

Securing Redis Connection

No encryption and access controls

Stunnel buildpack

- Sits between dynos and Redis

Clients needs to install this buildpack

Recommended in production environment

Share and Upgrade Heroku Redis
